INTRODUCTION

Highly skilled and dynamic DevOps and Site Reliability Engineer with a passion for Automation, Continuous Integration and Continuous Delivery. Dedicated and motivated Software Developer with a degree in Engineering & Computer Science and a strong programming background, seeking to apply his problem-solving skills and deep analytical thinking as a DevOps Engineer.

KEY SKILLS & COMPETENCIES

- Multiple coding language background - Java, JavaScript, C, Python, Go, Node.js
- Cloud native and multi provider experience - AWS certified, Azure, GCP
- CI/CD pipelines and Infrastructure as Code expertise - Azure DevOps, Github Actions, Terraform
- Proficient in containerisation and containers orchestration - Docker, Kubernetes (CKA)
- Windows & UNIX knowledge, shell and scripts writing experience - SysAdmin
- Strong team-worker & self-driven learner, keen attention to details

WORK EXPERIENCE

Amido

Dec 2020 — Present

Site Reliability Engineer

- Led source code re-structure building stronger CI/CD pipelines, refactoring terraform code into reusable modules, and authoring automation scripts.
- Extended the team's observability capabilities implementing GCP cloud errors reporting integration for Node applications and configuring dashboards and alerts.
- Improved clients security with encrypted environment variables and secrets handling via Mozilla SOPS, bundled into automated pipelines.
- Ensured high security standards performing Penetration Testing for clients and internal Networks.

AltoStack

Nov 2019 — Nov 2020

DevOps Engineer

- Performed infrastructures migration from AWS to Microsoft Azure maintaining efficiency and immutability of resources, improved Kubernetes manifests and Helm charts for Node and React applications.
- Maintained reusable Terraform modules for each component of the platform; CI, Monitoring, Logging, Service Discovery and Secrets Management.
- Worked with software development groups in Agile environments utilising cutting edge technologies and ensured they had robust pipelines and required facilities for application developments and flawless deployments.

G-Research

July 2018 — Sept 2019

Identity and Access Management Developer

- Owned and designed Terraform integration with Okta Cloud Identity and implemented the provider plugin in Go.
- Developed REST API with focus on backend security and structured CI/CD pipelines utilising Jenkins.
- Managed digital identities lifecycle (Joiner, Mover, Leaver) with Sailpoint IdentityIQ and coded Java integrations with third party software GIT, JIRA, Active Directory.

3D Compare

Sept 2017 — July 2018

FullStack Developer

- Implemented and maintained most of the website functionalities in Node, creating a platform where sellers and customers can process and update orders.
- Designed and structured MongoDB schemas for users management and implemented roles resulting in different access to the dashboards.
- Ensured backend security, data protection and prevented vulnerabilities with version updates and code revisions.

CERTIFICATIONS & EDUCATION

Certified Kubernetes Administrator (CKA)

The Linux Foundation

AWS Cloud Practitioner

Amazon Web Services

Engineering in Computer Science

Sept 2013 — May 2017

University of Rome "La Sapienza"

- Software Development - Programming
- Algorithms Knowledge - Complexity Analysis
- Network Infrastructure - Communications

ADDITIONAL SKILLS & INTERESTS

- Languages: Italian - Native, English - fluent
- Archlinux user - DIY enthusiast, guitar player, runner, yoga
